Choose the Basic Tone 1 Use the basic tones and variations to choose the musical genre and the feel of the song. Variations Basic Tones For more information about each parameter.

Your country is very far from Japan. The custom DSP engine and COSM sound modeling integration give this bass multieffects pedal the processing power to handle any combination of effects thrown at it. To top off the behemoth that is the GT10B, truly intuitive operation methods such as the Effects Select buttons and rotary encoder knobs give the BOSS an edge on the competition. USB connectivity and a rigorous design ensure that the BOSS GT10B is always ready and easy to use, no matter where or when. I've been a pod user for years and while it's a great product from line 6 whether it's the original, the xt or the pro but it has its limitations. The GT10B on the other hand takes your tones to a different level. Aside from having great models it also has an arsenal of effects. Whether you use all of them or not is up to your discretion. What is really beneficial about the GT10B is that it is not a toy. It's an intense computer processor for bass and you will see more and more of this with the newer stuff coming out this year. If you want to learn about editing, midi implementation, looping, backing up and restoring data to a computer then this is the machine for you. This thing is very transparent without effects which makes it nice to just keep in the chain and make use of the tuner and pedal. And when effects are needed there are a lot of very good sounding ones to choose from and tweak. Great presets sounds, I liked the synth and factory fretless presets a lot. I also liked the looper function, it is pretty basic but since I do the audio checkup in the band I can easily save a bass pattern and while the band is playing along with the loop I can go downstage and listen to the whole band to check up the levels. You can always save your loops on your pc though. Verisign. Massive power of BOSS latest DSP and knowhow of sound modeling based on COSM provide ultimate effects capability and essential features for bass.

With a Parallel Effects Chain, Phrase Looper, and EZ Tone features, the GT10B pedal is clearly the most advanced yet friendly bass station on the market. Bass Tone Factory Powered by BOSS latest custom made sound processor, the GT10B provides dozens of stunning effects and COSM amp

models to explore, combine, and customize, but with careful attention given to the needs of bass players. Advanced sound Powered by the custommade newgeneration processor and BOSS proprietary sound modeling method COSM, the GT10B multieffects pedal ushers in a new era of audio quality for guitarists. BOSS huge accumulated knowhow of effects and sound modeling are fully integrated into this new flagship multieffects floorboard. As a result, tone quality is supreme, and response to playing dynamics is much more natural and musical. And not just for the stage the Boss GT10B is also great in the studio thanks to its USB capability and digital output. EZ TONE wizard The GT10B is a pro players dream, but it s also friendly and easytouse. The innovative EZ Tone wizard helps you create topquality sounds quickly. It offers a truly intuitive approach based on graphical icons to get the sounds that bass players are imagining. No more struggling with parameters on the LCD or multiple cursor commands. As well as the EZ TONE, managing the Boss GT10B pedal is truly intuitive. For example, the new Positional Tone Control allows tone and effects creation via a revolutionary Tone Grid where you place the pointer in a spatial area depending on what kind of tone or effects you want. Operation is similar to having compact pedals on a pedalboard quickly jumping from any effect to any effect. More flexibility and possibility GT10B s PARALLEL CHAIN offers two separate effects paths including COSM amp models for super tone capability or seamless switching from two bass effects paths. Two channels can be used simultaneously or blended by expression pedal, or even switched by playing dynamics.

Phrase Looper BuiltIn GT10B multieffects pedal comes equipped with PHRASE LOOPER. This inspiring feature allows phrases to be created using soundonsound loop recording for performance, practice, or as a sketchpad. USB Connectivity Connect the GT10B to a wide range of external gear via its rearpanel USB port, where audio and MIDI data bulk data can be streamed digitally to computers, digital recorders, or other compatible devices. Safely transfer precious data to and from the GT10B via USB as well. It s a BOSS tradition to build gear that looks great, is user friendly, and stands up to the rigors of the road. The Boss GT10B pedal is no exception, with its strong, stylish design, and six dedicated footswitches plus expression pedal. The highcontrast LCD and LED make using the GT10B a breeze even on dark stages or in glaring sunlight. The sturdy metal chassis is BOSS roadtough. Boss GT10B MultiEffects Pedal Features Dozens of bass centric effects and COSM amp models EZ TONE intuitive tone creation system uses graphic icons. Parallel effects chains can be blended or layered Phrase looper for sound on sound effects USB capability offers streaming audio in real time and MIDI data transfer. Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. See All Buying Options Add to Wish List Disabling it will result in some disabled or missing features. You can still see all customer reviews for the product. For me GT10 was a better option than using single pedals. With every multi effects pedal there will be preset you may never use so expect the unexpected however there are a lot presets to choose from so regardless of your playing style the GT10B has it. If you're a bassist that likes to keep it simple this pedal may not be for you.

If you want to build your own killer tones with ease or use the presets programed by professionals and then taylor them to your liking I highly recommend the Boss GT 10B. Reviewed in the United States on January 22, 2020 Used this back in my touring days a bit. Not for me, a bit complicated, couldnt quite craft the strange sounds I was looking for, and honestly I have always been a bit of a clean tone guy. Well built to withstand abuse. Please try again later. DB 5.0 out of 5 stars A brilliant powerful piece of equipment and exactly what I needed. For me GT10 was a better option than using single pedals. If you want to build your own killer tones with ease or use the presets programed by professionals and then taylor them to your liking I highly recommend the Boss GT 10B.Please try again later. Please try again later. Jesse 5.0 out of 5 stars You get endless possibilities with this thing. The sky is the limit. Not all of the effects you get are top of the line, but it does a pretty good

job at most things. If you only need one specific sound, you may be better off buying a high end single pedal instead of this board. But, as much as this thing costs, its absolutely worth the price. As with anything so powerful, it can be hard to use if you dont take the time to learn how it works. However, there are plenty of easy to follow youtube videos going over everything this pedal can do. Please try again later. Please try again later. SlickDee 3.0 out of 5 stars Not for me, a bit complicated, couldnt quite craft the strange sounds I was looking for, and honestly I have always been a bit of a clean tone guy. Well built to withstand abuse. Please try again later. Please try again later. Fast Eddie 5.0 out of 5 stars Tremendous features and quality craftsmanship, there is however, a bit of a learning curve. Make no mistake, this is one terrific box. It is also not a cheap piece of gear.

Still, if you want a quality piece of gear that can grow with your music and musicianship, then you would be hard pressed to find a better bass multieffect pedal than the GT10B. Unfortunately, I must rescind my endorsement of the Boss GT10B. It happened the first time during a service at my church gig. I had to pull the unit and go dry. I did not use the unit for the next two or three weeks. When I went back to use it, it seemed to be working normally. Then a couple of weeks later, I had the same issue, this time right before a gig during sound check. Again, I had to run my bass dry. I took the GT10B to a local tech to have it repaired and by the time they were able to check it, the GT10B, of course, was functioning correctly. They called Boss when they could not find a problem and the Boss representatives stated that this is not a known issue. Therefore, I can no longer recommend that you purchase this unit. While I no longer gig at the rate that I once did, I still am playing two to three times a week. Please try again later. Please try again later. Itza Munoz 5.0 out of 5 stars Please try again later. Please try again later. Mtdbasszx5 5.0 out of 5 stars Please try again later. Please try again later. bliksim 4.0 out of 5 stars Please try again later. Please try again later. Andy 5.0 out of 5 stars Please try again later. Please try again later. Dave 4.0 out of 5 stars However it is a nice effects processor to combined with dedicated pedals too. I bought this item because of the pedal,loop, EZ Tone creating and 400 patches capability, inputs,outputs,channels, and enormus ways to combine the effects. GT 10B did not disappoint me, neither surprised me too much with the pure effects tones but with the effects combinations it did since it is like a synthesizer. Please try again later. Please try again later. Sebastian Leon Bichett 5.0 out of 5 stars Please try again later. Please try again later. Used Very GoodShips from Japan.

Delivery time is about 8 to 20 days after your payment. Expedited option is about 5 to 12 days. All shipping come with tracking number. Contact us for more details. Please try again. Sorry, we failed to record your vote. Please try again Being a 3 piece, the bass stands out more. This processor has given me all that I need. Also, Ive managed to rip open a hole in the space time continuum after fiddling with various knobs and settings, so Ive checked that off my bucket list Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again. It may not display this or other websites correctly. You should upgrade or use an alternative browser. Sign Up Now! Cant find any documentation on this. May seem obvious to some but not the feeble minded. Click to expand. Ive had my GT10B for about a week and a half and its all starting to make sense now. Im still having a bit of trouble understanding how the EXP Pedal and EXP Pedal SW are separated from each other in terms of having the pedal perform two separate sweep functions per patch. For example having the pedal be a volume control, but when the switch is activated the assigns take over and the pedal simultaneously toggles reverb on while making the pedal function only as an effect level sweep for the reverb no volume control. Also the EXP1 Func has to be set to only ONE function. Either Wah, volume, OR bend. This drove me crazy for while but I think Im starting to figure it out.

Awesomeness ensues. As I understand it the best way to proceed is to have the manual and this forum handy which should see me through really learning to harness the power of the gt10b. My question has to do with how I can combine the gt with software like mainstage which seems to be an equally powerful, albeit geared to words a different market, effects processor. It may be overkill to have both or it may just be plain useless but I cant shake this feeling that there is a way to combine the two in a live setting to produce some awesomeness. Any one combined these two powerhouses Any tips Cant find any documentation on this. Click to expand. Here are my thoughts as a place to start off on. Connect via USB. Turn direct monitor off Set computer to through which Im not sure how to do just yet Set input select to USB In As I understand it the signal passes thru in to the computer and potentially on to the sub outputs and so on without passing through the effects processing. Gt10b ends up being a dedicated effects as well as sound card that will feed front of house as well as my own amp and who knows what else. Thoughts Heres another question. Im trying to get some sort of connection between the floorboard editor and my floorboard. Iv attached a picture so you can see what I get. The floorboard is in factory setting and is connected to computer via USB. Then I have a connection to the computer having done so in the audio midi setup in my utilities on my Mac running lion. What am I missing Heres another question. What am I missing Click to expand. Ive recently noticed that the onboard tuner is flat by about a quarter scale when compared with a Korg Pitchblack and a Strobe on String tuner that I use. Anyone else see that. Is the tuner something that is user adjustable I didnt see anything in the manual. Thanks Ive recently noticed that the onboard tuner is flat by about a quarter scale when compared with a Korg Pitchblack and a Strobe on String tuner that I use.

Is the tuner something that is user adjustable I didnt see anything in the manual. Thanks Click to expand. Had a question about the Channel Select. I cant seem to be able to do this, any tips I am a new owner of one and was just wondering if any of you guys have a liking to any of the presets I play through a gk 1001 amp, and mark bass 410 cab. Thanks I am a new owner of one and was just wondering if any of you guys have a liking to any of the presets I play through a gk 1001 amp, and

mark bass 410 cab. Thanks Click to expand. Does pretty much everyone do it this way, or do a lot of people use the assignments to contour their sound? I was kind of wondering about the assignment method as far as which is easier and more popular to use among the GT10b users. I am a new owner of one and was just wondering if any of you guys have a liking to any of the presets I play through a GK 1001 amp, and mark bass 410 cab. Thanks Click to expand. I've only had my GT10B for a couple months now so I'm not the most experienced GT10b user but I've used many effects before and I know what I'm doing and what I want out of the gear I use. But here is a sound I really like as a standard rock bass sound. I'll go through it all so you can try creating the same thing yourself, maybe analyze what I did and get inspiration from that. I'll try uploading my actual patch later if you want. Note I really enjoy a Justin Chancellor type rock sound but I also really like the old Incubus sound too think Make Yourself and Morning View. 92% of the time I play with my fingers but I really enjoy using a pick too. I also play through a GK 1001rbii. With this patch I have the on board preamp set to passive mode. On the amp my standard settings go something like this Input vol about 10 o'clock, 15db pad on, contour off, Presence at about 12 o'clock, Everything in the EQ is at noon and I adjust depending on the room and situation. Boost at 3 o'clock, tweeter all the way down and woofer to taste. Okay now for the GT settings.

I'll just progress from left to right. First switch everything off. The compressor, then, is first. Also, I'm displaying everything from the list mode as opposed to the knob display mode so I won't bother naming the parameter names, just the values. I have CTL1 set to Chorus and CTL2 Set to Reverb. And my output level on the GT10b is at about an 11. This sound was created as a great rock sound that fits well in my band and sounds great with fingers or a pick. It sits nice in our mix but each to his own and with your tastes and your gear you might hate it but it's one of the best tones I've been able to create and one that I've been the most happy with. I created this tone with a fresh set of Ernie Ball Hybrid slinkys. I love the fullness and openness of new strings. Thinking about switching to Elixirs for this reason. I hope this gives you ideas and let me know what you think of the sound. I will try that out. It sounds like a great sound. I play a Marcus Miller with the John East preamp installed, so I will try some different approaches that way as well. Had a question about the Channel Select. Had a question about the Channel Select.
